## OPERATION IDENTIFICATION

Operation Identification is a program that involves marking property with an identifying number or other identifier as a means of discouraging burglary or theft. It also provides police with a way to identify property should it be stolen and recovered.

**INSTRUCTIONS:** Engrave items such as laptop computers, cameras, ipods, or other property of value with an identifying series of numbers, letters or phrase. It is recommended that the property be engraved with your driver's license number to assist law enforcement in returning your property should it be recovered. If using your driver's license to mark your property, also include the two-digit state abbreviation. After engraving the items, complete the below information for each of the items and retain this document in a safe location. Should you become the victim of a burglary or theft, you will be able to utilize this document to quickly describe any of the recorded items taken and increase your chances of getting your property returned.
